

Dear Hiring Team,

I am excited to apply for the Senior Software Engineer, Backend - Data Products position at Rippling.

I recently completed my B.Tech in Artificial Intelligence and Data Science and am currently gaining hands-on software development experience through my internship at Tejstarter IT Solutions. During my academic and internship experience, I have worked with Python, JavaScript, Node.js, APIs, databases, Git, and modern development workflows. I have also built projects involving backend development, automation, data processing, and AI-powered applications.

What particularly excites me about Rippling is the opportunity to work on large-scale systems and data-driven products that impact thousands of businesses globally. I enjoy solving technical problems, learning new technologies quickly, and building reliable software solutions. My background in AI and software development has given me a strong foundation in analytical thinking, debugging, and creating efficient solutions.

While my professional experience is at an early stage, I bring strong motivation, adaptability, and a commitment to continuous learning. I am eager to contribute to a high-performing engineering team, take on challenging problems, and grow as a backend engineer while delivering meaningful impact.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my skills, projects, and enthusiasm for backend engineering can contribute to Rippling's success.

Sincerely,

Anuj Suryawanshi
